

Follow the SILENCE: Paper proving COVID-19 vaccines cause myocarditis is removed from publication without explanation

By Edward Hendrie | *Great Mountain Publishing* | October 31, 2021

To paraphrase a commenter to the below video, this censorship would be the top story of the day if it weren't for censorship.

Drs. Peter McCullough and Jessica Rose jointly published an article that revealed the cause and effect relationship between the COVID-19 vaccines and myocarditis.

Peter McCullough, M.D., is an American cardiologist. He was vice chief of internal medicine at Baylor University Medical Center and a professor at Texas A&M University. He is editor-in-chief of the journals Reviews in Cardiovascular Medicine and Cardiorenal Medicine. He is one of the most highly respected and published cardiologists in the U.S.

Jessica Rose, PhD is a specialist in Orthopedics and Sports Medicine at Stanford Children's Health Specialty Services.

After the preliminary draft of their report was peer-reviewed and approved for publication, it was posted by the publisher on its NIH website. Shortly thereafter, the publisher, Elsevier, without giving a reason, suddenly withdrew the publication. There is now a notice posted that states simply:

The Publisher regrets that this article has been temporarily removed. A replacement will appear as soon as possible in which the reason for the removal of the article will be specified, or the article will be reinstated.

That "temporary" removal has turned into a permanent removal. Elsevier has notified Drs. McCullough and Rose that their article will not be republished. Oddly, Elsevier gave no reason for the removal other than explaining that it is their sole prerogative to do so.

But we are not left to guess why the report was removed. All one needs to do is read the report, and it will be clear why the publisher removed it. I tracked down the report and read it. The report revealed the following startling facts.

Within 8 weeks of the public offering of COVID-19 products to the 12-15-year-old age group, we found **19 times the expected number of myocarditis cases in the vaccination volunteers** over background myocarditis rates for this age group.

The publisher decided that fact, supported by empirical evidence, cannot be allowed. The long arm of the pharmaceutical companies reached out and let their influence be known.

Another fact that the report revealed was that the incidence of myocarditis among teenagers is much worse than even the raw statistics obtained from the Vaccine Adverse Events Reporting Service (VAERS) indicate. The report states:

Because of the spontaneous reporting of events to VAERS, we can assume that **the cases reported thus far are not rare, but rather, just the tip of the iceberg**. Again, under-reporting is a known and serious disadvantage of the VAERS system.

In prior blogs, I have reported that the VAERS system only reports about 1% of the actual adverse events.

New Study Confirms the VAERS System is Only Reporting Approximately 1% of Anaphylaxis from COVID-19 Vaccines

Harvard-Vaccine-Injury-Study-Page-6-Reveals-1-Percent-Report-Rate (Download)

VAERS is a reporting system that shows correlation. Further analysis is required to prove causation. Drs. McCullough and Rose did that further analysis and opined that the VAERS data indicates a cause and effect between the vaccinations and teenage myocarditis. Their report indicates:

It is noteworthy that 'vaccine-induced myocarditis' was in fact used as the descriptor by medical professionals as the reason for the myocarditis in the VAERS database.

The report concluded:

Thus, due to both the problems of under-reporting and the known lag in report processing, this analysis reveals a strong signal from the VAERS data that the risk of suffering CIRM [COVID-19-Injection-Related Myocarditis] – especially males is unacceptably high. Again, children are not a high-risk group for COVID-19 respiratory illness, and yet they are the high-risk group for CIRM.

- We are in the Great Covid vaxx adverse reaction/death coverup period now. The numbers will start to soar soon with the boosters and be blamed on some new variant. Pfizer/Big Pharma/corrupt govt and health dept's have blood on their hands.

Digital Surveillance — the Real Motive Behind Push to Vaccinate Kids

By Michael Nevradakis, Ph.D. | *The Defender* | December 15, 2021

COVID-19 may have caught much of the planet by surprise in late 2019 and early 2020, but much of the groundwork for the technology now widely used as a "response" to the pandemic was conceptualized and developed years prior.

In the U.S. and throughout the world, there has been a recent push to implement a variety of "vaccine passport" regimes, many of which rely on digital technologies such as mobile applications to carry a record of — so far, at least — one's **COVID-19** vaccination records.

These "tools" are presented by public officials and significant sections of the media in recent weeks and months as an inevitability of sorts, a technological progression as natural as breathing.

They are also presented as a "new" response to an unprecedented crisis.

These technological applications are touted as a means of keeping businesses open and ensuring "peace of mind" for members of the public who remain wary about entering public spaces.

But just how new is this "new" technology? And will the use of **technology** be limited to COVID vaccinations, or for purposes of "health?" ... [continue](#)
